

Technology Discovery – Wappalyzer & WhatWeb

Name: FIREWALL FAIRY

Date: 7July, 2026

1. Overview

Technology Discovery is the process of identifying the technologies used by a website. It helps understand the target before moving to further reconnaissance.

Tools Used

- **Wappalyzer** – Browser extension that detects website technologies.
- **WhatWeb** – Command-line tool that fingerprints websites using HTTP headers, HTML, cookies, and metadata.

Category: Technology Discovery

2. Purpose

1. Identify web technologies
2. Detect web server and operating system
3. Find JavaScript libraries and frameworks
4. Understand the target's technology stack

3. Installation & Verification

Wappalyzer

Installed as a Firefox browser extension.

```

Detected Plugins:

[Apache]

The Apache HTTP Server Project is an effort to develop and maintain an open-source HTTP server for modern operating systems including UNIX and Windows NT. The goal of this project is to provide a secure, efficient and extensible server that provides HTTP services in sync with the current HTTP standards.

Version : 2.4.34 (from HTTP Server Header)

Google Dorks: (3)

Website : <<http://httpd.apache.org/>>

[Bootstrap]

Bootstrap is an open source toolkit for developing with HTML, CSS, and JS.

Website : <<https://getbootstrap.com/>>

[Cookies]

Display the names of cookies in the HTTP headers. The values are not returned to save on space.

String : october_session

[Email]

Extract email addresses. Find valid email address and syntactically invalid email addresses from mailto: link tags. We match syntactically invalid links containing mailto: to catch anti-spam email addresses, eg. bob at gmail.com. This uses the simplified email regular expression from <<http://www.regular-expressions.info/email.html>> for valid email address matching.

String : admissions@ewubd.edu,info@ewubd.edu

String : admissions@ewubd.edu,info@ewubd.edu

[Google-Analytics]

This plugin identifies the Google Analytics account.

Version : Universal

Account : UA-146902251-1

Website : <<http://www.google.com/analytics/>>

[Google-Tag-Manager]

This plugin identifies Google Tag Manager.

Account : UA-146902251-1

Website : <<http://www.google.com/tagmanager/>>

[HTML5]

HTML version 5, detected by the doctype declaration

[HTTPServer]

HTTP server header string. This plugin also attempts to identify the operating system from the server header.

OS : Ubuntu Linux

String : Apache/2.4.34 (Ubuntu) (from server string)

[HttpOnly]

If the HttpOnly flag is included in the HTTP set-cookie response header and the browser supports it then the cookie cannot be accessed through client side script - More Info: <http://en.wikipedia.org/wiki/HTTP_cookie>

String : october_session

[JQuery]

A fast, concise, JavaScript that simplifies how to traverse HTML documents, handle events, perform animations, and add AJAX.

Version : 3.4.0

Version : 3.0.0

Website : <<http://jquery.com/>>

[Lightbox]

Javascript for nice image popups

[Meta-Author]

This plugin retrieves the author name from the meta name tag - info:

<<http://www.webmarketingnow.com/tips/meta-tags-uncovered.html>>
#author

String : East West University

[Open-Graph-Protocol]

The Open Graph protocol enables you to integrate your Web pages into the social graph. It is currently designed for Web pages representing profiles of real-world things . things like movies, sports teams, celebrities, and restaurants. Including Open Graph tags on your Web page, makes your page equivalent to a Facebook Page.

Version : website

[PasswordField]

find password fields

String : password (from field name)

[Script]

This plugin detects instances of script HTML elements and returns the script language/type.

String : text/javascript

[X-UA-Compatible]

This plugin retrieves the X-UA-Compatible value from the HTTP header and meta http-equiv tag. - More Info:

<<http://msdn.microsoft.com/en-us/library/cc817574.aspx>>

String : IE=edge

HTTP Headers:

HTTP/1.1 200 OK

Date: Tue, 07 Jul 2026 12:20:40 GMT

Server: Apache/2.4.34 (Ubuntu)

Cache-Control: no-cache, private

Connection: close

Content-Type: text/html; charset=UTF-8

4. Technologies Discovered(between them)

Technology	Detected By	Purpose
Apache 2.4.34	Wappalyzer, WhatWeb	Web Server
Ubuntu Linux	Wappalyzer, WhatWeb	Operating System
Bootstrap 3.3.7	Wappalyzer, WhatWeb	UI Framework
jQuery 3.4.0	Wappalyzer, WhatWeb	JavaScript Library
Google Analytics	Wappalyzer, WhatWeb	Visitor Analytics
Google Tag Manager	Wappalyzer, WhatWeb	Tag Management
Cloudflare CDN	Wappalyzer	Content Delivery Network
Font Awesome	Wappalyzer	Icons
Open Graph	Wappalyzer, WhatWeb	Social Media Metadata

Session Cookie (october_session)	WhatWeb	User Session Management
Email Addresses	WhatWeb	Public Contact Information

6. Key Findings

- Website is running Apache [2.4.34 on Ubuntu Linux](#).
- Uses [Bootstrap and jQuery](#) for the frontend.
- Uses [Google Analytics and Google Tag Manager](#) for tracking visitors.
- Uses [Cloudflare CDN](#) to improve website performance.
- Found public email addresses:
 - admissions@ewubd.edu
 - info@ewubd.edu
- Session cookie [october_session](#) is protected with the [HttpOnly](#) flag.
